EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

IN THE CLAIMS

The following obvious errors to claim 1 have been corrected as follows:

1. (Currently Amended) In a roll forming machine of the type which forms an indeterminate length debris shedding rain gutter of a desired lateral profile from a uniform width supply strip of sheet metal having a pair of parallel straight edges, said roll forming machine defining a predetermined path of travel for said supply strip through a plurality of roll forming stations, wherein the desired lateral profile includes a lower trough and an upper hood, with the lower trough including a back wall and a front wall joined to a bottom wall, an arrangement for selectively providing independent adjustment of said profile at at least one predetermined one of said plurality of roll forming stations, the arrangement comprising:

a pair of kick forming rollers mounted to a bracket at the entry to a first selected roll forming station and adapted to provide an inward bend near [the] an upper end of the front wall so that [the] an upper edge of the front wall is behind [the] a forward end of the hood, wherein the bracket is independently adjustably mounted to the roll forming machine; and

a block adjustably mounted to the roll forming machine at a second selected roll forming station where there is a first roller in contact with the exterior of the back wall of the trough and a

second roller in contact with the exterior of the bottom wall of the trough, wherein the block slidingly engages the front wall of the trough to form a substantially right angle where the front wall joins the bottom wall, and wherein the block is independently adjustable toward and away from the first [and] roller.

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: One reason for allowance is that the invention as claimed *inter alia* is directed to a specific roll forming machine for forming a debris shedding rain gutter where independently adjustable pair of kick forming rollers are mounted so as to inwardly bend an upper edge of the front wall behind a forward end of the hood of the rain gutter and where an adjustable block is mounted for slidingly engaging the front wall of the trough of the rain gutter to form a substantially right angle between the front wall and the bottom by moving the block towards and away from the roller that contacts the exterior of the back wall of the trough. These combined features are not shown by the art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
